

Important Safety Information

How to Recognize a Natural Gas Leak

LOOK

If you see a damaged connection to a natural gas appliance, dirt/water blowing into the air, a dry patch of grass, fire or an explosion near a pipeline.

LISTEN

If you hear unusual sounds like hissing or whistling.

SMELL

If you smell the distinctive odor* of natural gas.

*Some persons may not be able to smell the odor because they have a diminished sense of smell due to COVID-19, olfactory fatigue (normal, temporary inability to distinguish an odor after prolonged exposure to it), or because the odor is being hidden by other odors present, like cooking, damp, musty or chemical odors. In addition, certain pipeline and soil conditions can cause odor fade (the loss of odorant so that it is not detectable by smell).

Pipeline Maintenance and Your Safety

SoCalGas pipelines deliver natural gas to approximately 22 million residential and business customers. To protect the integrity of its energy system, SoCalGas routinely performs various pipeline safety and maintenance tasks, including testing, repairing, replacing, and upgrading of its pipelines — and have ongoing technical training and testing for employees. To perform these tasks, we must be able to access the pipeline right-of-way. Please keep the area above pipelines accessible.

For more information on our integrity management plan outline, visit [socalgas.com/PipelineSafety](https://www.socalgas.com/PipelineSafety).

Contact 811 Before You Dig. It's free!

If you plan to install a fence, plant a tree or dig for any reason, protect your family, neighbors, and the pipelines near you by following these important safety steps:

Mark Out your proposed project area in white.

Contact 811 Underground Service Alert (USA) at california811.org or dial **811**, to submit a location request at least two business days before digging.

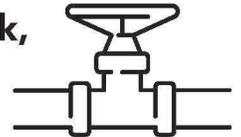

Wait To Dig until we either mark our natural gas pipelines or you are advised that the area is clear.

Use Only Hand Tools within 24 inches on each side of marked utility line to carefully expose the exact locations of all lines.

Note: SoCalGas does not mark customer-owned natural gas lines, which typically run from the meter to natural gas equipment. To have customer-owned lines located and marked before a project, contact a qualified pipe-locating professional.

If You Smell Gas, Suspect A Leak, or Damage Has Occurred:

Immediately Evacuate the area.

Call SoCalGas at **1-800-427-2200** from a safe location.

Call 911 promptly, from a safe location, if there is damage resulting in a natural gas leak that may endanger life, cause bodily harm or property damage.

Don't smoke, or light a match, candle or create any other flame.

Don't turn electrical appliances or lights on or off, operate motorized equipment or vehicles, or use any device that could cause a spark.

Don't attempt to control the leak or repair a damaged pipe or meter. Natural gas leaking from a plastic pipe can create static electricity that can ignite the natural gas.

Report any pipeline damage by calling SoCalGas immediately at **1-800-427-2200**. Even a slight gouge, scrape or dent to a pipeline may harm the integrity of the pipe or cause a dangerous leak in the future.
